CERTIFICATES

Siren Certification: Completed (SentinelOne Mastery) **ISC2 CC:** In Progress

PROFESSIONAL SUMMARY

Computer Science student at Florida Atlantic University with hands-on experience in cybersecurity, SOC operations, and AI development. Skilled in EDR triage, threat analysis, incident response, and Windows defense through active SOC internship and WRCCDC competition experience.

EDUCATION

Florida Atlantic University

Sep 2024 – Sep 2028

B.A., Computer Science | GPA: 3.8 | Dean's List – Fall 2024–Present

Minors: Cybersecurity, Artificial Intelligence

Coursework: Computer Architecture, Logic & Computer Design, Software Engineering, Python Programming

SKILLS

Programming & Tools: Python, JavaScript, HTML/CSS, VHDL, Quartus Prime, ModelSim, Git, GitHub, VS Code, PyCharm, Jupyter

Cybersecurity: SentinelOne EDR, Joe Sandbox, VirusTotal, Windows hardening, PowerShell, log monitoring, threat hunting via Autoruns/Process Explorer, Linux, SIEM workflows

Soft Skills: Incident documentation, SOC escalation, troubleshooting, teamwork, communication

Languages: English (fluent), Spanish (intermediate)

WORK HISTORY

Arete IR | SOC Analyst Intern

Jan 2026 – Present

- Triaged 9,000+ SentinelOne EDR alerts — analyzing process trees, command-line activity, and behavioral indicators to classify true/false positives and execute appropriate response actions
- Investigated suspicious files and URLs using Joe Sandbox and VirusTotal; documented findings to support SOC escalation and analyst handoffs
- Authored internal training documentation on PowerShell triage and scheduled task persistence removal, adopted across the SOC team
- Applied MITRE ATT&CK framework to contextualize alert behavior, identify persistence techniques, and support accurate triage decisions across high-volume alert queues

Core Elevator | Elevator Technician

Jul 2023 – Present

- Performed electrical wiring, soldering, component replacement, diagnostics, and safety system servicing
- Interpreted schematics and restored controller functionality; maintained accurate technical documentation

PROJECTS

Cybersecurity Windows Defense Scripts

Nov 2025 – Present

- Built PowerShell-based Windows defense toolkit covering firewall automation, system triage, and persistence detection via Sysinternals — used as hands-on WRCCDC prep and SOC supplemental tooling
- Scripts target real-world attack techniques including scheduled task abuse, registry run key persistence, and unauthorized service installation

Echo — AI Companion & Personal Assistant

Feb 2025 – Present

- Building a Python-based AI system combining an emotionally aware companion (contextual memory, adaptive tone, personality-driven responses) with a modular voice + text assistant interface and OpenAI API integration
- Architected for extensibility — plugin-style command modules, hands-free voice I/O, and a focus on meaningful human-AI interaction rather than generic assistant behavior

PLATFORM PROFICIENCY

Windows

- Hardening, firewall management, user/group policy, and service configuration in defense scenarios
- Persistence hunting via Autoruns, Process Explorer, scheduled tasks, and registry run keys; PowerShell scripting for triage and automation

Linux

- Service defense and administration — SSH, SMB, Apache/web servers — across NCAE Cyber Games and WRCCDC environments
- Bash scripting, log analysis, permission hardening, and CTF challenge experience on Debian/Ubuntu-based systems

CLUBS & COMPETITIONS

FAU Cybersecurity Club | Officer & Social Media Manager

Sep 2025 – Present

- Manage club social media presence and member outreach; National Society of Collegiate Scholars (NSCS)

Competitions

- CCDC Qualifiers — 15th/45 overall; Incident Response: 7th/45, Injects: 15th/45
- Red vs. Blue (SWIFT / Amazon) — 7th/25 teams | Windows defense & Injects
- NCAE Cyber Games — National Linux defense event (SSH, SMB, web server, CTF); FAU placements: 5th/12 and 10th/12
