Work History

Arete IR | SOC Analyst Intern Jan 2026 - Jun 2026

SentinelOne EDR

- Triaged and resolved ~9,600 SentinelOne EDR alerts, pivoting across process, file, and network events in Storyline to speed up true/false-positive calls.
- Built a custom **Deep Visibility (S1QL) hunting query** that surfaced malware (PDFProSuite, BrowserHelper) hidden in endpoint AppData\Local directories, closing a detection gap across ~20 endpoints spanning 15 client accounts.
- Authored the **investigation playbook**: used **RemoteOps** to remotely locate, collect, and track flagged files, extracted file hashes, and submitted confirmed indicators to the client block list, standardizing response for recurring cases.
- Developed a parallel **playbook** for PDF-embedded riskware (PDFFlex, PDFInstaller, and related variants) using the same locate-hash-validate-escalate workflow, extending detection coverage to a new threat category.

Microsoft Sentinel / Entra ID

- Investigated **Microsoft Sentinel and Azure/Entra ID sign-in logs** for anomalous logins and cloud-based IOCs across client tenants, narrowing scope for faster containment.
- Escalated ~50 client-impacting incidents with detailed write-ups, supporting SOC leadership and client remediation decisions.

Threat Intelligence / MITRE ATT&CK

- Extracted IOCs (hashes, IPs, domains) from incidents, cross-checked threat intel sources, and mapped adversary behavior to **MITRE ATT&CK** to strengthen detection coverage.
- Validated findings with **OSINT tools** (VirusTotal, Joe Sandbox) and defined escalation criteria for confirmed malicious detections, reducing false-positive escalations.
- Authored **SOC training documentation** covering internal tool usage, the custom detection query, Arete's detection rules and triage steps, and the riskware PDF playbook, supporting analyst onboarding and knowledge continuity.

Projects (GitHub)

SOC Competition Scripts ↗ Nov 2025 - Present

- Built a **cross-platform Blue Team toolkit** for CCDC/WRCCDC-style competitions: PowerShell scripts that snapshot baseline system state, cross-reference open ports against firewall rules, flag persistence mechanisms and unsigned binaries, and harden Windows with deny-by-default firewall policy, plus a Linux enumeration module for fast triage under time pressure.
- Packaged a **Sysinternals tools installer** (Process Explorer, Autoruns, Sigcheck, TCPView) for deeper investigation beyond the initial scripted sweep, all built non-destructively around a snapshot-before-hardening workflow to keep rollback and tamper detection intact.

SentryOS | EDR Platform ↗ Sep 2026

- Built a **three-component EDR platform**: a Windows Service agent running **Sysmon** for telemetry, a **FastAPI backend** for threat evaluation, and a server-rendered console for reviewing detections.
- Implemented real-time detection with process lineage visualization, incident correlation across hosts, a rules engine for custom detections, and an **AI analyst (Groq)** for context-specific alert triage.

Clubs, Leadership & Competitions

FAU Cybersecurity Club | Officer, Competitor, Social Media Manager Sep 2025

National Society of Collegiate Scholars (NSCS) | Member Jan 2025 - Present

SFISSA Hack the Flag 2026 | South Florida ISSA, Boca Raton ↗ Sep 2026

- **1st Place out of 33 teams** at South Florida's biggest annual CTF, sponsored by AWS, Horizon3.ai, and TORQ.
- Solved web exploitation, AI/ML exploitation, and decoding challenges.

ShellHacks 2026 | Florida International University ↗ Sep 2026

- Built **JARVIS**, a voice-controlled desk robot with face tracking and gesture recognition, at Florida's largest hackathon, integrating **ElevenLabs** conversational AI, **Gemini** vision, OpenCV, and an Arduino-driven servo in Python.
- Demoed the live build to judges and sponsors, drawing visits from **Waymo** and **Blackstone** representatives.

CCDC Qualifiers | Blue Team Competitor ↗ Sep 2025

- **15th place overall** (Incident Response 7th/45, Injects 15th/45) in the national qualifying event, defending Windows systems and completing injects.

Horse Plinko Cyber Challenge 4 | University of Central Florida ↗ Oct 2026

- **Blue Team** competitor on a five-box Windows and Linux network against a live Red Team: remediated Jenkins and MariaDB service tampering, removed hidden root-level persistence (cron backdoors and duplicate-UID accounts), closed an Apache webshell path, and completed security injects.

Red vs. Blue Competition | Hosted by SWIFT, sponsored by Amazon Spring 2026

- **7th of 25 teams**, competing on inject and Windows defense tasks.

NCAE Cyber Games Spring 2026

- FAU teams placed **5th/12 and 10th/12**, defending Linux services (SSH, SMB, web server) and solving CTF challenges.

Education

Florida Atlantic University - BA CS & BSAI with Cybersecurity Systems Dual Degree/Major (GPA: 3.8) Sep 2024 - Spring 2028

Boca Raton, FL | Achievements: Dean's List - Fall 2024 - Present (> 3.5 GPA)

Certificates

- **SentinelOne IR Engineer (SIREN)** - employer-sponsored capstone certification for IR partners; covered Deep Visibility/S1QL threat hunting, Singularity blocklist/exclusion administration, incident handling, and false-positive tuning
- **Governance, Risk, Compliance, and Data Privacy** - IBM (Jul 2026)
- **Foundations of Cybersecurity** - Google (Jan 2026)
- **Microsoft Security Essentials Professional Certificate** - Microsoft & LinkedIn (In Progress)

Skills

- **Threat Hunting & Detection:** MITRE ATT&CK mapping, IOC analysis & enrichment, threat intelligence, hypothesis-driven triage, Windows hardening, log monitoring
- **EDR/SIEM Platforms:** SentinelOne (Deep Visibility/S1QL, Storyline, RemoteOps Forensics), Microsoft Sentinel, Azure/Entra ID
- **Offensive Security (TryHackMe):** Nmap, Gobuster, Hydra, John the Ripper, enum4linux, smbclient, Netcat, LinPEAS; web enumeration, command injection, SMB enumeration, credential attacks, Linux privilege escalation
- **Scripting & Automation:** Python, PowerShell, VHDL, Quartus Prime, ModelSim, Git, GitHub, VS Code, PyCharm, Jupyter, Docker
- **Forensics & Analysis Tools:** Sysinternals Suite (Process Explorer, Autoruns, TCPView, Sysmon), Wireshark, Snort, Linux
