

PARKER D. RUBIN

Boca Raton, FL | 561-699-4839 | pdrubinn@gmail.com | linkedin.com/in/parkerrubin | github.com/ParkerRubin | parkerrubin.github.io

Professional Summary

Cybersecurity-focused CS student at Florida Atlantic University with hands-on SOC analyst experience triaging EDR alerts, investigating cloud environments (Azure/Entra ID, Microsoft Sentinel), and producing threat intelligence from live incidents. Skilled in incident response, IOC/MITRE ATT&CK threat hunting, and Windows defense via a SOC internship and competitive Blue Team (WRCCDC, CCDC, NCAE) experience.

Education

Florida Atlantic University — B.A., Computer Science (GPA: 3.8)

Sep 2024 - Spring 2028

Boca Raton, FL | Achievements: Dean's List — Fall 2024 - Present (> 3.5 GPA)

Certificates

- SentinelOne IR Engineer (SIREN) — employer-sponsored capstone certification for IR partners; curriculum covered Deep Visibility/S1QL threat hunting, Singularity blocklist/exclusion administration, incident handling, and false-positive tuning
- Governance, Risk, Compliance, and Data Privacy — IBM (Jul 2026)
- Foundations of Cybersecurity — Google (Jan 2026)
- Microsoft Security Essentials Professional Certificate — Microsoft & LinkedIn (In Progress)

Skills

Threat Hunting & Detection: MITRE ATT&CK mapping, IOC analysis & enrichment, threat intelligence, hypothesis-driven triage, Windows hardening, log monitoring

EDR/SIEM Platforms: SentinelOne (Deep Visibility/S1QL, Storyline, RemoteOps Forensics), Microsoft Sentinel, Azure/Entra ID

Scripting & Automation: Python, PowerShell, VHDL, Quartus Prime, ModelSim, Git, GitHub, VS Code, PyCharm, Jupyter, Docker

Forensics & Analysis Tools: Autoruns, Process Explorer, Wireshark, Snort, Linux

Soft Skills: Troubleshooting, teamwork, communication, documentation

Work History

Arete IR | SOC Analyst Intern

Jan 2026 - Jun 2026

- Triaged and resolved ~9,600 SentinelOne EDR alerts, using Storyline to pivot across related process, file, and network events, accelerating true/false-positive determination and analyst response time
- Investigated Microsoft Sentinel and Azure/Entra ID sign-in logs for anomalous logins and cloud-based IOCs across client tenants, narrowing scope for faster containment
- Extracted IOCs (hashes, IPs, domains) from incidents, cross-checked threat intel sources, and mapped adversary behavior to MITRE ATT&CK to strengthen detection coverage
- Escalated ~50 client-impacting incidents with detailed write-ups, supporting SOC leadership and client remediation decisions
- Built a custom Deep Visibility (S1QL) hunting query in SentinelOne to surface malware (PDFProSuite, BrowserHelper) hidden in endpoint AppData\Local directories, closing a detection gap across ~20 endpoints spanning 15 client accounts
- Authored the accompanying investigation playbook: using RemoteOps to remotely locate, collect, and track flagged files, extracting file hashes, and submitting confirmed indicators to the client site block list, standardizing response for recurring cases
- Validated findings with OSINT tools (VirusTotal, Joe Sandbox) and defined escalation criteria for confirmed malicious detections, reducing false-positive escalations
- Developed a parallel playbook for riskware embedded in PDF files (PDFFlex, PDFInstaller, and related variants) using the same locate-hash-validate-escalate workflow, extending detection coverage to a new threat category
- Authored SOC training documentation covering internal tool usage, the custom detection query, Arete's custom detection rules and triage steps, and the riskware PDF playbook, supporting analyst onboarding and knowledge continuity

Projects (GitHub)

Cybersecurity Windows Defense Scripts

Nov 2025 - Present

- Developed PowerShell-based Windows defense tools including firewall automation, system triage, and persistence detection using Sysinternals, reducing manual steps for common triage tasks

AI Assistant: Project Nova | Personal Project

Feb 2025 - Present

- Developed Python-based AI assistant with speech I/O, memory, and modular tools using OpenAI APIs, enabling hands-free task automation; undergoing a major redesign to improve modularity

Clubs & Leadership

Florida Atlantic University | Cybersecurity Club — Officer, Social Media Manager

Sep 2025

- (3x) Blue Team competitor in WRCCDC practice events (Windows defense, incident response, Injects)
- National Society of Collegiate Scholars (NSCS)

Competitions

CCDC Qualifiers

Sep 2025

- Blue Team Competitor in the national event (Windows defense, incident response, Injects) — 15th Place: Incident Response 7th/45, Injects 15th/45
- Red vs. Blue Competition hosted by SWIFT, sponsored by Amazon — 7th/25 Teams (Inject & Windows)
- NCAE Cyber Games — Blue Team Competitor in the national Linux defense event (SSH, SMB, Web Server defense, CTF challenges). FAU Teams Placement: 5th/12 and 10th/12
